

We're changing people's lives every day.

Imagine

With more specialists performing more advanced, minimally invasive procedures, Saint Vincent remains the neurosurgical leader in our region. In fact, Saint Vincent neurosurgeon Isam Khoja, MD, was the first physician to introduce artificial cervical disc replacement surgery to our community. For those suffering from degenerative disc disease in the neck, this life-changing technique is designed to preserve normal motion—and offers better mobility than traditional spinal fusion. With more experts dedicated to finding better ways to treat you, just imagine where we'll be taking health care next.
